

FROST FREE SILLCOCKS

ANTI-SIPHON | MULTI-TURN | 1/4-TURN

FROST-PROOF DESIGN

LONGER VALVE OPERATIONAL LIFE

Frost Free Sillcocks allow users to winterize their outdoor hose-end valves with minimal effort. This valve works best when installed at a downward angle allowing water to drain upon shutoff. With no water in the valve body, you can rest assured that, when winter comes, this valve won't burst.

ANTI-SIPHON MODELS

PREVENT BACKFLOW AT THE SOURCE

More utility is every plumber's dream and ProLine Series offers a line of Frost Free Sillcocks that have a built-in Anti-Siphon device. This basic device will prevent any water that has left the valve from flowing back into the main fresh-water line. For more information, contact your local BK Products sales representative.

APPLICABLE CERTIFICATIONS:

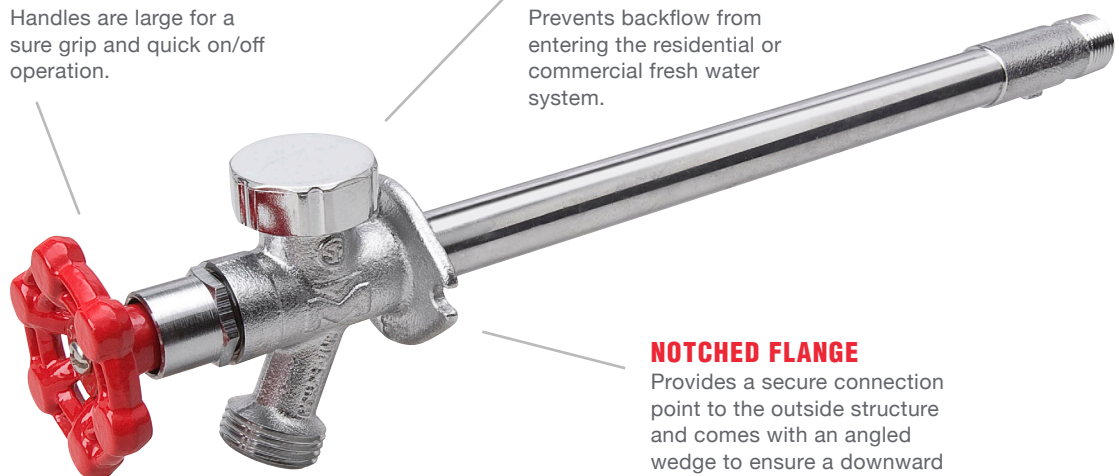

WETTED SURFACE CONTAINS LESS THAN 0.25% LEAD BY WEIGHT

EASY TURNING

Handles are large for a sure grip and quick on/off operation.

ANTI-SIPHON

Prevents backflow from entering the residential or commercial fresh water system.

NOTCHED FLANGE

Provides a secure connection point to the outside structure and comes with an angled wedge to ensure a downward installation for draining.

FROST FREE SILLCOCKS

CONNECTOR FEATURES:

- Chrome-plated brass body and tube for corrosion resistance
- 3/4" hose thread outlet complies with ANSI B.1.20.7
- Notched flange for stable installation
- Automatically drains upon shutoff
- Built-in lockshield
- NSF 61 Compliant
